AI in Real Life :What We Let Machines Decide For Us

AI in Everyday Life

- AI systems are part of daily digital activities
- Used in social media, search engines, and mobile applications
- Help users save time and make faster decisions

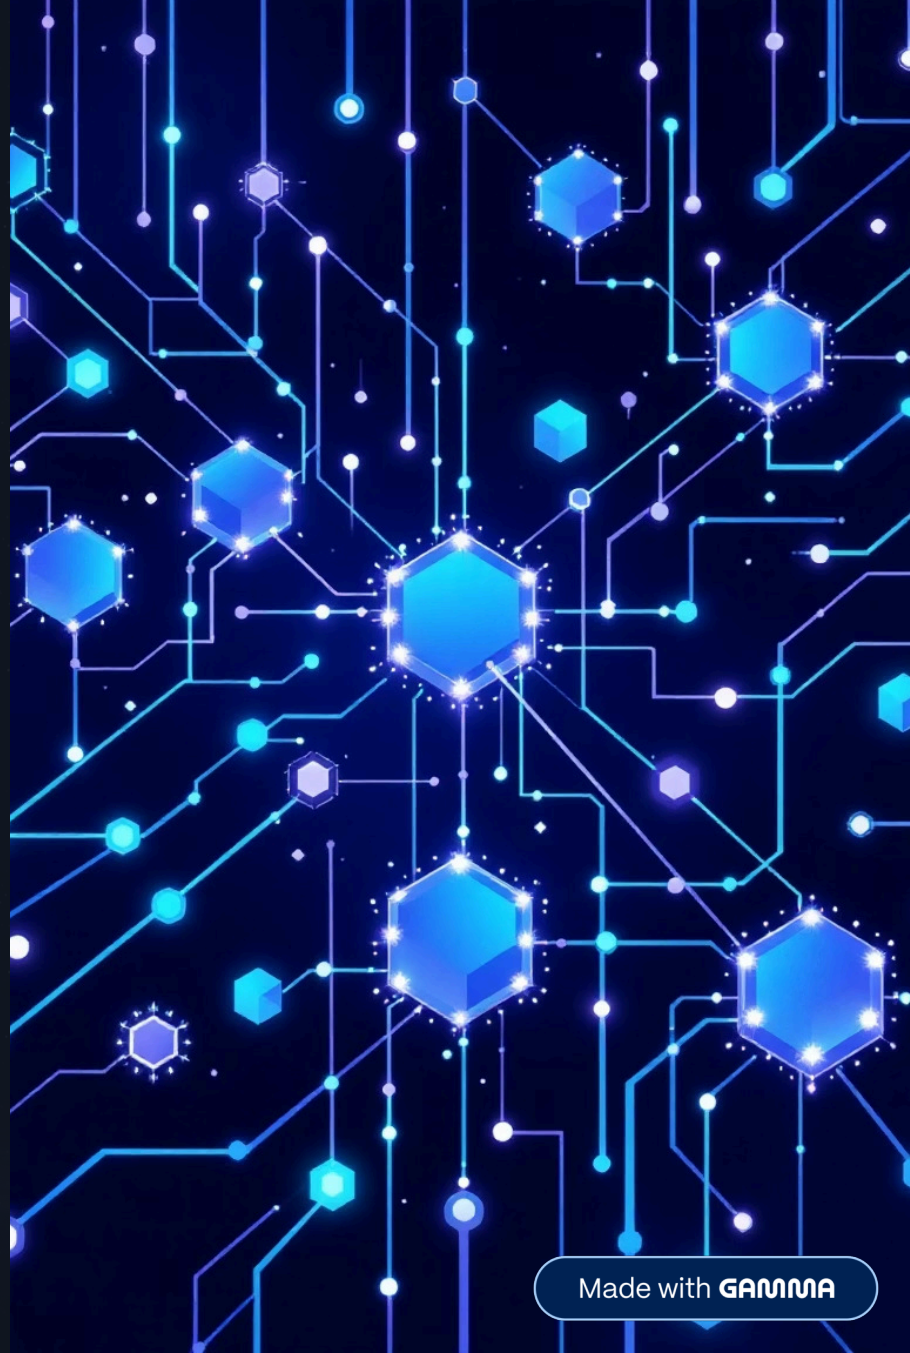

Made with GAMMA

AI and Online Content Selection

- AI algorithms decide what content users see online
- Applied in social media platforms and streaming services
- Recommendations are based on user behavior and interaction history

Implications:

- Limited exposure to diverse content
- Repeated presentation of similar information

Made with GAMMA

AI Supporting Daily Decisions

- AI supports routine decision-making
- Used in navigation, online shopping, and email filtering
- Designed to improve convenience and efficiency

Implications:

- High dependence on automated systems
- Reduced user awareness of AI influence

Made with GAMMA

Convenience vs. Control

AI tools are trusted because they are fast and efficient

Increased reliance may reduce human control

Decisions can be influenced without clear awareness

Made with GAMMA

AI in Hiring (CV Screening)

- AI systems automate candidate screening
- Decisions rely on historical hiring data

Implications:

- Potential exclusion of qualified applicants
- Reproduction of existing bias
- Lack of contextual understanding

Made with GAMMA

AI in Healthcare (Risk Prediction)

- AI supports clinical risk assessment
- Used for prioritization and diagnosis assistance

Implications:

- Risk of inaccurate predictions
- Data limitations affect outcomes
- Oversimplification of complex cases

Made with GAMMA

AI in Policing (Facial Recognition)

- AI identifies individuals through image analysis
- Applied in law enforcement contexts

Implications:

- Unequal accuracy across demographics
- Risk of false identification
- Privacy and civil rights concerns

Made with GAMMA

AI in Education (Automated Evaluation)

- AI tools assess assignments and detect plagiarism
- Adopted by educational institutions

Implications:

- False accusations possible
- Limited evaluation of creativity and intent
- Dependence on automated judgment

Made with GAMMA

AI in Education (Automated Evaluation)

- AI tools assess assignments and detect plagiarism
- Adopted by educational institutions

Implications:

- False accusations possible
- Limited evaluation of creativity and intent
- Dependence on automated judgment

Made with GAMMA

Key Concept & Ethical Question

Key Concept:

- AI lacks contextual and moral understanding
- Learns from biased historical data

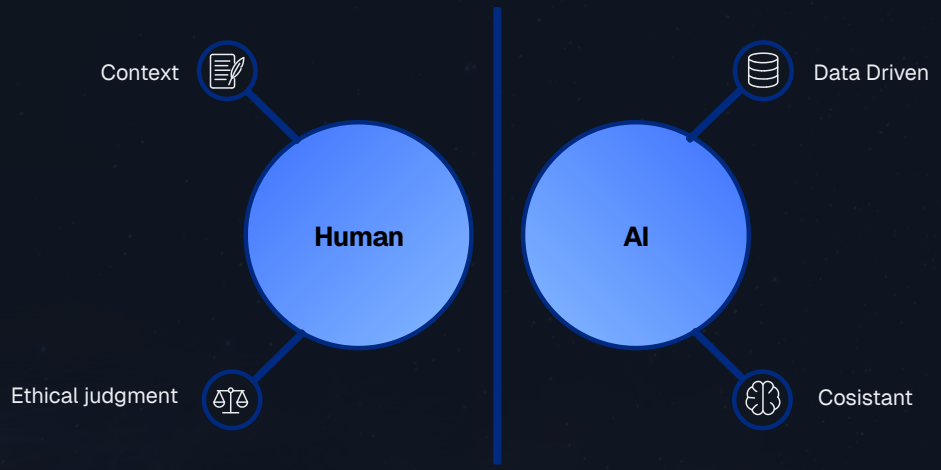

Ethical Question:

> If AI makes an incorrect decision, who is accountable?

Made with GAMMA

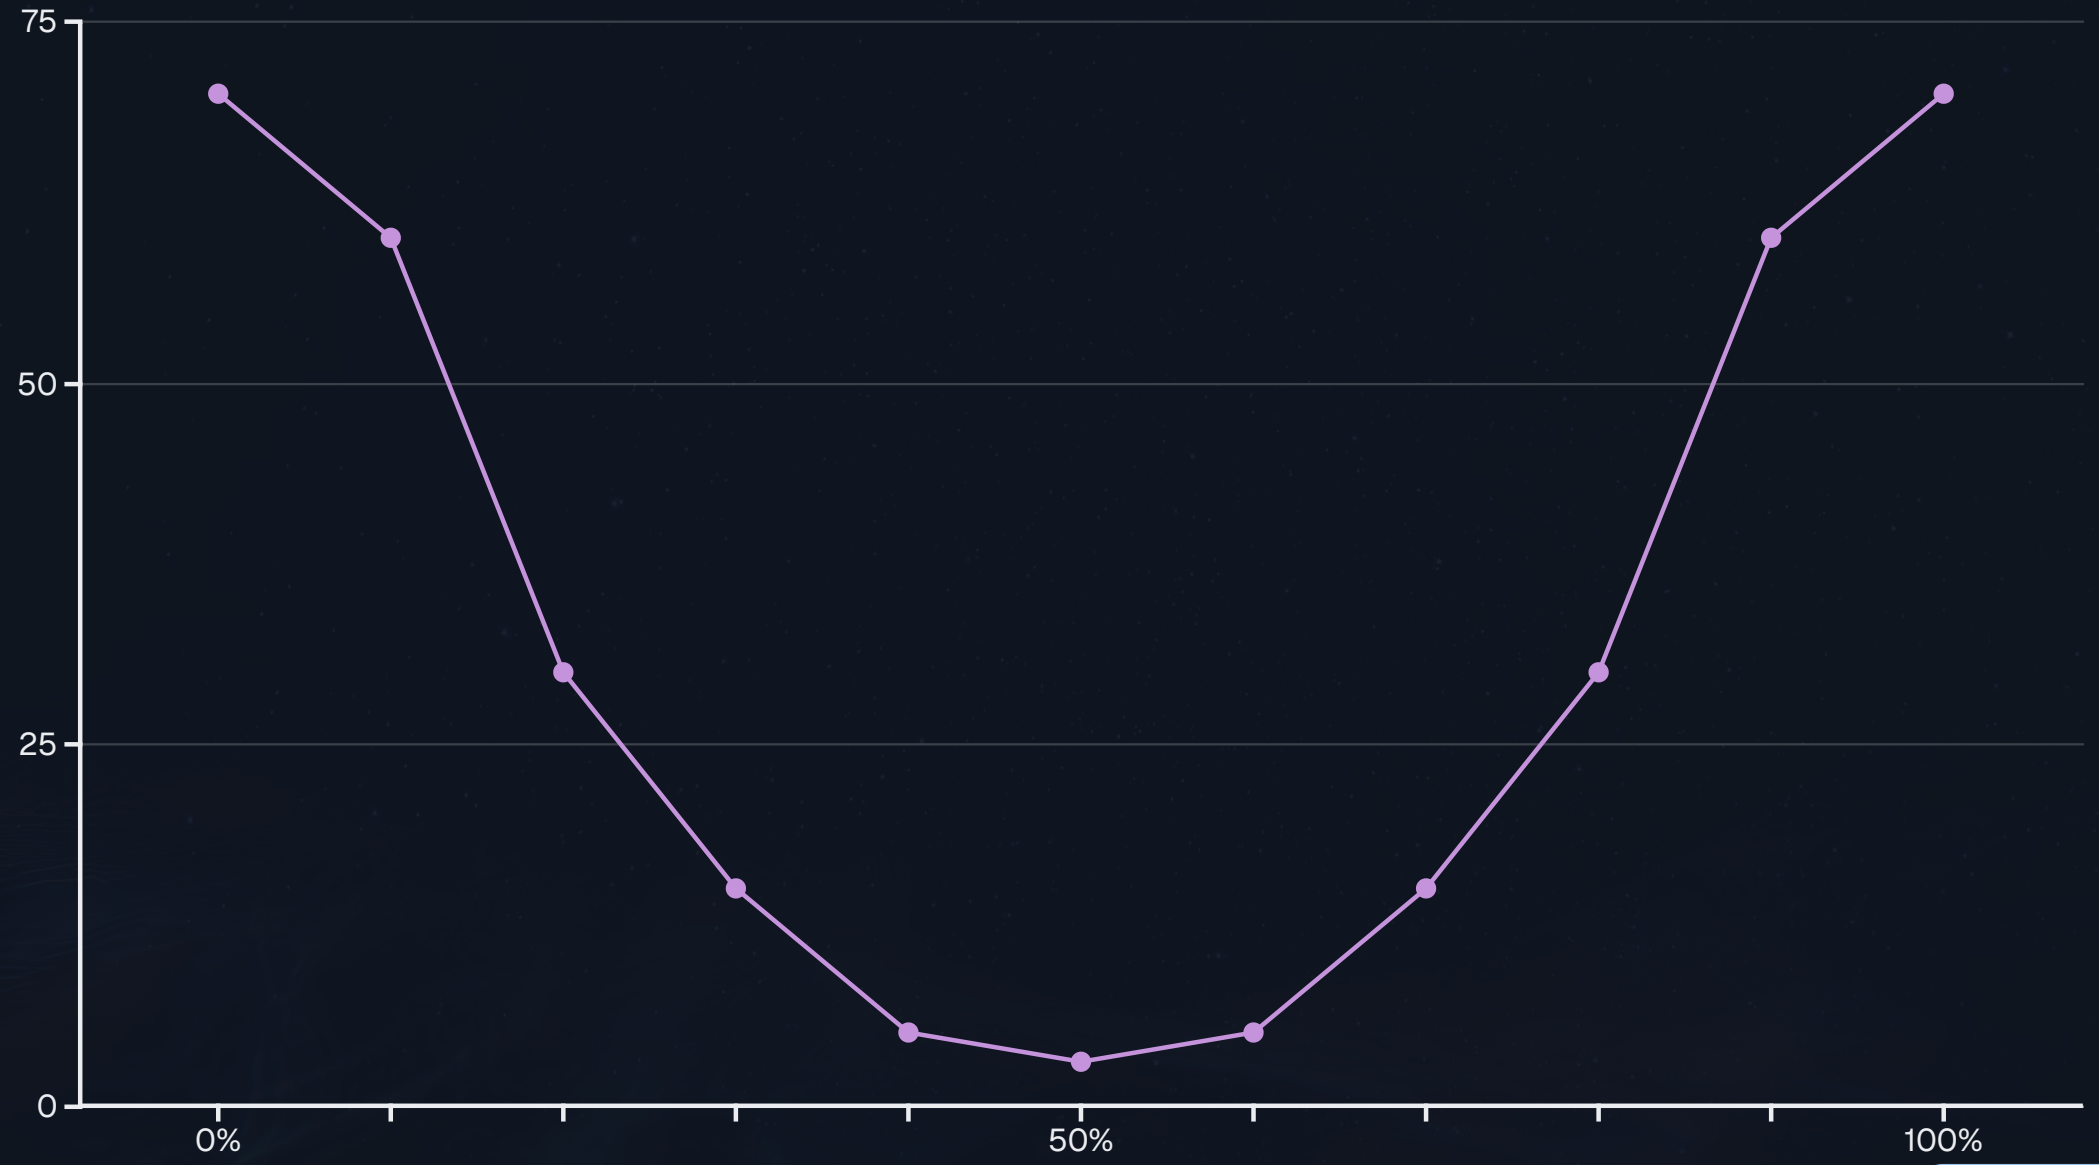

A Decision Needs To Be Made

but who should make it !

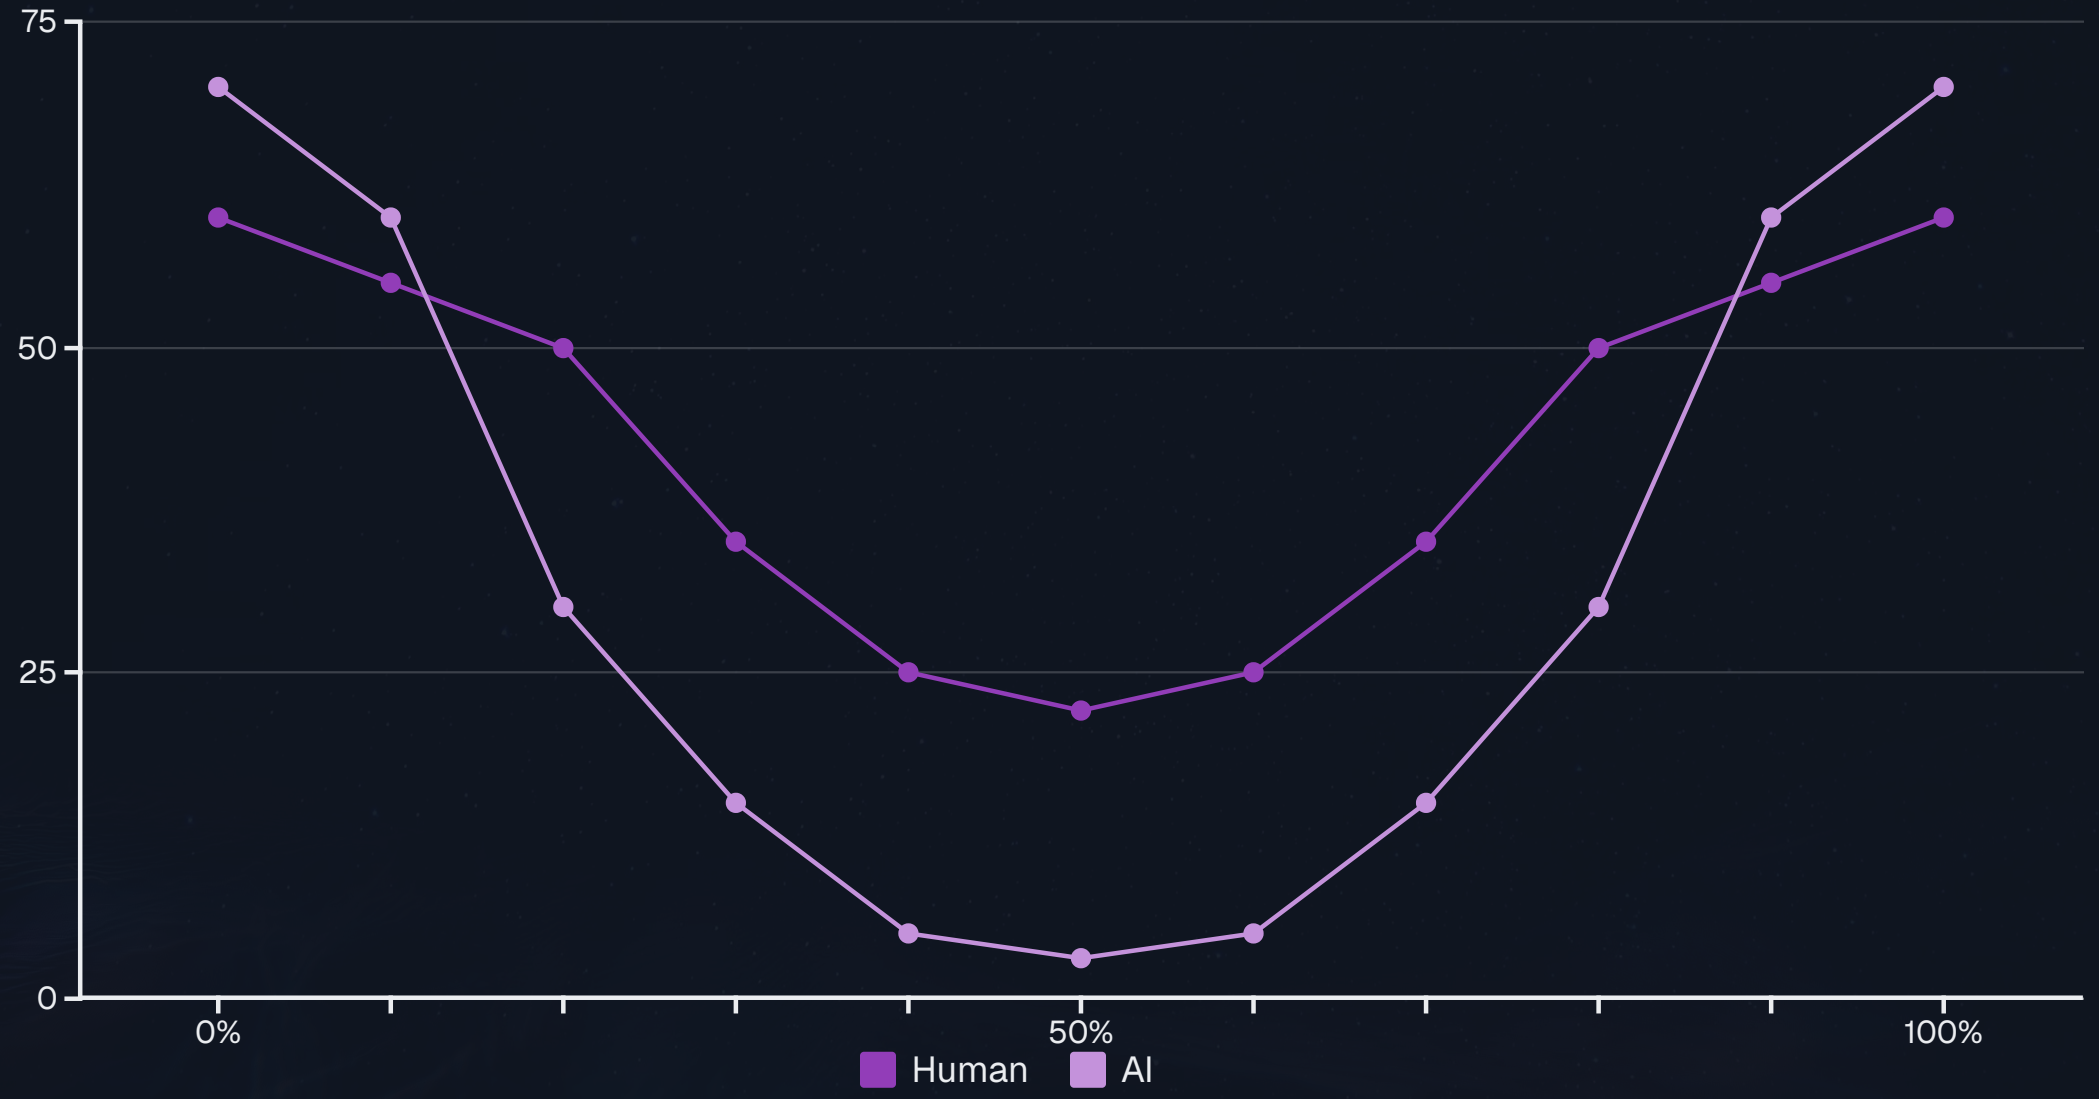

Made with GAMMA

Confidence-Success

Augmented Intelligence (The Best Option)

- Combines AI accuracy with human judgment
- Highest overall success rate
- Requires careful presentation to avoid bias

Made with GAMMA

From AI Decisions to Human Responsibility

- AI systems do not understand consequences
- They cannot explain or defend their decisions
- Responsibility always returns to humans

Made with GAMMA

Decision vs. Recommendation

AI can analyze data and predict outcomes

AI should not make final moral or life-changing decisions

AI works best as a decision-support tool

Made with GAMMA

What Humans Add That AI Cannot

Empathy and emotional understanding

Ethical reasoning

Social and cultural awareness

Ability to question and override decisions

Made with GAMMA

The Balance We Need

- Total dependence on AI reduces human control
- Rejecting AI limits progress and efficiency
- Human-guided AI offers the best balance

Made with GAMMA

AI increasingly shapes everyday and critical decisions

Convenience should not replace accountability

Human judgment remains essential

Made with GAMMA

- AI is a powerful tool, not a moral agent
- Humans must remain accountable for decisions
- The future depends on how responsibly we use AI

> Just because AI can decide for us, doesn’t mean it should.
